Bhanu Chand

San Francisco, CA • 925-200-7131 • Gbchand09@gmail.com

Software Engineer with **3+ years of experience** building **Java backend services and full-stack applications** in large codebases. Experienced in designing **REST APIs**, improving **service reliability**, and debugging production issues by analyzing logs and fixing root causes. Have owned features from development through deployment, worked across sprints and supported systems used by hundreds of users. Comfortable writing clean code, handling failures, and delivering consistent results in fast-moving teams.

WORK EXPERIENCE

Software Engineer | Meta, San Francisco, USA — Jan 2024 - Present

- **Owned development lifecycle** of Java Spring Boot backend services and React applications, designing REST APIs and production workflows used by hundreds of internal users.
- Automated complex internal operations by building scalable backend workflows, reducing manual effort by **70%** and improving turnaround time for dependent teams.
- Designed and scaled full-stack systems supporting **500+ users**, maintaining consistent **sub-5-second response times** through efficient request handling and data processing.
- Improved service reliability and performance by identifying bottlenecks, optimizing backend logic, and ensuring systems met production **SLAs and availability** requirements.
- Built internal tools enabling **300+ engineers** to query structured system data efficiently, improving debugging speed and decision-making in production scenarios.

Software Developer | Oracle, Hyderabad, India — Nov 2021 - Dec 2022

- Developed **Java backend features** and **REST APIs** supporting core internal workflows, contributing to multiple successful test environment deployments in a large enterprise codebase.
- Improved **service reliability** by debugging and resolving **10+ backend defects**, adding unit tests for critical code paths to prevent regressions.
- Strengthened **backend service integrations** across **2-3 dependent services** by validating data flows and improving error handling, reducing integration issues during testing cycles.
- Delivered backend features consistently across **multiple 2-week sprints**, collaborating with senior engineers and maintaining code quality in a version-controlled, CI-driven environment.
- Investigated and fixed **backend issues** by analyzing logs and application behavior during testing, improving system stability and reducing repeat QA issues.

Project | Grape Leaf Disease Detection and Classification (Machine Learning) — Aug 2023 - Dec 2023

- Built an end-to-end machine learning pipeline to classify grape leaf diseases using **image preprocessing, feature extraction, and ensemble models**, working with a dataset of **3,000 labeled images** across four classes.
- Implemented and evaluated **bagging, SVM, Random Forest, and Decision Tree models**, achieving **around 93% classification accuracy** on a test set of **1,100+ images** after tuning preprocessing and model parameters.
- Designed image segmentation workflows using **GrabCut and global thresholding** to isolate diseased regions, improving feature quality and reducing noise in training data.

SKILLS

Programming Languages: Java, C++, Python, JavaScript, TypeScript, SQL
Backend & APIs: Spring Boot, Spring Cloud, Spring Security, RESTful APIs, Microservices, JPA/Hibernate
Frontend: React, HTML, CSS, JavaScript, TypeScript, React Hooks, Context API, Axios, Responsive UI Design
Databases: MySQL, PostgreSQL, Oracle
Cloud & DevOps: AWS, Docker, CI/CD pipelines, GCP (familiarity)
Testing & Tooling: JUnit, Mockito, Jest, Git, Maven, npm

EDUCATION

University of Central Missouri, Warrensburg, Missouri
Master of Science, Computer Science
